551 Quantitative Magnetic Resonance Imaging of Human Brain Development: Ages 4–18

561 Induction of c-fos mRNA in Rat Medial Prefrontal Cortex by Antipsychotic Drugs: Role of Dopamine D2 and D3 Receptors
K.M. Merchant, L.M. Figur and D.L. Evans

571 Changes in Limbic and Prefrontal Functional Interactions in a Working Memory Task for Faces
A.R. McIntosh, C.L. Grady, J.V. Haxby, L.G. Ungerleider and B. Horwitz

585 Areas PMLS and 21a of Cat Visual Cortex: Two Functionally Distinct Areas
B. Dreher, C. Wang, K.J. Turlejski, R.L. Djavadian and W. Burke

600 Activation of Human Prefrontal Cortex during Spatial and Nonspatial Working Memory Tasks Measured by Functional MRI

612 Active Representation of Shape and Spatial Location in Man
S.C. Baker, C.D. Frith, R.S.J. Frackowiak and R.J. Dolan

620 Prenatal Development of Parvalbumin Immunoreactivity in the Human Striate Cortex
Q.L. Cao, X.X. Yan, X.G. Luo and L.J. Garey

631 The Distribution of Callosal Connections Correlates with the Pattern of Cytochrome Oxidase Stripes in Visual Area V2 of Macaque Monkeys
J.F. Olavarria and P.L. Abel

640 Short-Term Synaptic Plasticity in the Visual Cortex During Development
A.S. Ramoa and M. Sur
Cerebral Cortex (ISSN 1047-3211) is published bimonthly by Oxford University Press, 2001 Evans Road, Cary, NC 27513.

Subscriptions are available on a calendar-year basis. The annual rate (Volume 6, 1996) for individuals is £90 (UK & Europe), US$125 (USA & elsewhere). The annual rate (Volume 6, 1996) for institutions is £165 (UK & Europe), US$250 (USA & elsewhere).

Single issues are available for £32 (UK & Europe), US$48 (USA & elsewhere).

All prices include postage.

Personal rates apply only when issues of the journal are sent to a private address and payment is made by personal check or credit card. All subscription, single issue, back issue, changes-of-address, and claims for missing issues should be sent to:

Cover Picture: The cingulate sulcus is a primary sulcus located on the medial wall of the frontal lobe. Its exact position varies from one individual to another. Here we show the average location of this sulcus, expressed as a color-coded probability map. This map was obtained by tracing the sulcus on 247 individual magnetic-resonance images (MRI) and then averaging all the tracings together. To allow such a 3D averaging, the individual MRIs were first transformed to a standard stereotaxic space (Talairach and Tournoux 1988). The probability map is superimposed on a surface-rendered MR image; part of the right hemisphere has been removed to reveal the medial aspect of the left hemisphere with the probability map. The second ridge in the anterior portion of the probability map corresponds to the location of the more variable paracingulate sulcus. The 20 × 20 mm grid allows localization of the probability map in the standard stereotaxic space; the two thick lines indicate vertical and horizontal planes passing through the anterior commissure, respectively.

For details, see the paper by Paus et al. published in Cerebral Cortex 6:207-214, 1996.

Instructions for Authors appear only in the January/February issue. Submissions (original manuscript plus three copies) should be sent to P.S. Goldman-Rakic or P. Rakic, Co-Editors, Cerebral Cortex, Section of Neurobiology, Yale University School of Medicine, P.O. Box 208001, New Haven, CT 06520-8001.
